1. Oval-shaped hill that has been "plastered" by a glacier.
2. A long depression in the surface of the land that usually contains a river.
3. Type of lake formed when huge blocks of ice were buried in glacial till, melted, and formed a depression that filled with water.
4. Material from a terminal moraine, washed down stream, may be deposited as this over a wide area.
5. A jagged, knifelike ridge separating two cirques on a mountain.

6. The type of glacier that last covered large areas of North America.
7. A lake formed at the bottom of an alpine glacier.
8. This type of glacier is also known as valley or mountain.
9. Huge boulders carried long distances and left by glaciers.
10. An area where a continental glacier may still be seen.
