1. Horizontal movement of air in relation to the earth's surface.
2. Usually seen on clear winter nights in an array of shapes and colors near the earth's magnetic poles.
3. A vortex of air rising into a cloud.
4. Droplets of water vapor suspended in the air near the ground.
5. Water that has condensed on a cool surface overnight from water vapor in the air.

6. The physical process by which vapor becomes liquid or solid; the opposite of evaporation.
7. The air surrounding and bound to the earth.
8. Any wind that changes direction with the seasons.
9. High-level clouds that are mainly composed of ice crystals.
10. Is a measure of the amount of water vapor content of the air.
