1. A deep, amphitheatre-shaped basin found on a glaciated mountain.
2. Deposits along the side of a glacier are called _____ moraines.
3. Number of times that glaciers covered large areas of North America during the last million years.
4. The debris carried and deposited by glaciers.
5. Material from a terminal moraine, washed down stream, may be deposited as this over a wide area.
6. The condition of being covered with glaciers or masses of ice.
7. A jagged, knifelike ridge separating two cirques on a mountain.
8. A long depression in the surface of the land that usually contains a river.
9. An area where a continental glacier may still be seen.
10. Type of moraine found along the center of a glacier, formed when two glaciers join, their lateral moraines meeting to form the central band of debris.
