1. A valley, either with or without a river or stream, that was created by glacial melt water.
2. Ridges built up by deposits carried by streams flowing under glacial ice.
3. The debris carried and deposited by glaciers.
4. A term which describes a moraine that is formed where a glacier reaches its farthest extent before beginning to retreat.
5. Rugged, pyramid-shaped peak found on glaciated mountains.

6. Type of moraine found along the center of a glacier, formed when two glaciers join, their lateral moraines meeting to form the central band of debris.
7. U-shaped valley that was carved by a glacier and was then flooded.
8. A long depression in the surface of the land that usually contains a river.
9. The mechanical process of wearing or grinding something down.
10. Oval-shaped hill that has been "plastered" by a glacier.
